

# ScienceDirect, Empowering Knowledge

The leading platform of peer-reviewed scholarly literature

Presented by LIU YAO

# 2020年ScienceDirect检索竞赛，邀你来战！

活动时间：2020年3月16日 -7月31日

参与方式：通过扫描二维码进入答题页面，分别输入“姓名、学校、专业、学历、邮箱、联系电话”，即可直接答题。

**注意：为方便与获奖者联系，请确保输入信息真实有效。**

How do I use the new advanced search?

Last updated on 24/07/2018 01:46 PM

▶ Performing an advanced search tutorial

The new advanced search form offers an open design which allows you to specify one or more pieces of information (e.g., keywords, authors, dates, etc.) to find related documents in ScienceDirect. You can easily build an explicit query using multiple Boolean operators and nested clauses in your search.

None of the available fields are mandatory to an advanced search query. You are simply required to complete at least one field with searchable information.

## Use Boolean operators to combine multiple terms:

- Boolean operators currently supported include AND, OR, NOT, and the hyphen (or minus symbol)
- Boolean operators must be entered in all uppercase
- The hyphen (or minus symbol) is interpreted as the NOT operator

**For example:** `black -hole` will return results containing 'black', but exclude any instances where 'hole' appears with it.

- Boolean precedence is as follows:
  1. NOT
  2. AND
  3. OR
- Parentheses can be used when nesting clauses so the grouping is clear

**For example:** For `a OR b AND c`, enter `a OR (b AND c)`

- Quotation marks can be used to specify terms which must appear next to each other

**For example:** `("heart attack" OR "myocardial infarction") AND diabetes AND NOT cancer`

## NeuroImage

Volume 171, 1 May 2018, Pages 341-354

### Suprathreshold fiber cluster statistics: Leveraging white matter geometry to enhance tractography statistical analysis

Fan Zhang<sup>a</sup> , Weining Wu<sup>b, a</sup>, Lipeng Ning<sup>a</sup>, Gloria McAnulty<sup>c</sup>, Deborah Waber<sup>c</sup>, Borjan Gagoski<sup>c</sup>, Kiera Sarill<sup>c</sup>, Hesham M. Hamoda<sup>d</sup>, Yang Song<sup>e</sup>, Weidong Cai<sup>e</sup>, Yogesh Rathi<sup>a</sup>, Lauren J. O'Donnell<sup>c</sup>

# Journal of Alloys and Compounds

An Interdisciplinary Journal of Materials Science and Solid–State Chemistry and Physics

Editor-in-Chief: [L. Schultz](#)

> [View Editorial Board](#)

## General Perspective

- The *Journal of Alloys and Compounds* is an international peer-reviewed medium for the publication of work on materials comprising compounds as well as alloys. Its great strength lies in the diversity of disciplines which it encompasses, drawing together results from materials science...

[Read more](#)

- The journal **will not consider topics** on liquid alloys, traditional steel, wear, creep, welding and joining, organic materials and polymers, coordination chemistry, ionic liquids, catalysis and biochemistry; it **will not consider** papers reporting only syntheses without any properties, purely computational papers without sufficient experimental validation, CALPHAD papers without regard to experimental observations. The submission of papers on technology of materials and processing is not encouraged. First principle calculations can only be accepted, if the system has already been proven in experiment or if this is required for a dedicated application. Technical reports will not be accepted.

## Abstract

To design the high-energy-density Li-ion batteries, the anode materials with high specific capacity have attracted much attention. In this work, we adopt the first principles calculations to investigate the possibility of a new two dimensional boron material, named  $B_G$ , as anode material for Li-ion batteries. The calculated results show that the maximum theoretical specific capacity of  $B_G$  is  $1653 \text{ mAh g}^{-1}$  ( $\text{LiB}_{1.5}$ ).

Strategic timetable scheduling for last trains in urban railway transit networks

Kang L, Zhu X

Applied Mathematical Modelling  
2017 vol: 45 pp: 209-225

Well-designed timetables, with appropriate coordination between the last feeder trains and the last connecting trains so that passengers can enjoy "smooth" transfers, are desired by passengers and are a major service goal of metro corporations. This paper addresses the strategically last train scheduling problem in

**ARTICLE INFO**  
 Article history:  
 Received 14 February 2014  
 Accepted 27 April 2014

**SUMMARY**  
 Objective: The aim of this study was to investigate, using T2-mapping, the impact of functional instability in the ankle joint on the development of early cartilage damage.  
 Methods: Ethical approval for this study was provided. Thirty-six volunteers from the university sports program were divided into three groups according to their ankle status: functional ankle instability (FAI; initial ankle sprain with residual instability); ankle sprain Copers (initial sprain, without residual instability); and controls (without a history of ankle injuries). Quantitative T2-mapping magnetic resonance imaging (MRI) was performed at the beginning ("early-unloading") and at the end ("late-unloading") of the MR-examination, with a mean time span of 27 min. Zonal region-of-interest T2-mapping was performed on the talar and tibial cartilage in the deep and superficial layers. The inter-group comparisons of T2-values were analyzed using paired and unpaired *t*-tests. Statistical analysis of variance was performed.  
 Results: T2-values showed significant to highly significant differences in 11 of 12 regions throughout the groups. In early-unloading, the FAI-group showed a significant increase in quantitative T2-values in the medial, talar regions ( $P = 0.008$ ,  $P = 0.027$ ), whereas the Coper-group showed this enhancement in the ventral-lateral regions ( $P = 0.05$ ). Especially the comparison of early-loading to late-unloading values revealed significantly decreasing T2-values over time laterally and significantly increasing T2-values medially in the FAI-group, which were not present in the Coper- or control-group.  
 Conclusion: Functional instability causes unbalanced loading in the ankle joint, resulting in cartilage alterations as assessed by quantitative T2-mapping. This approach can visualize and localize early

**增加备注**

GENERAL NOTES  
 Ankle stability vs other joints

Qingyong Woon Just now  
 Ankle stability proves to be a very important element to prevent spine injuries as it acts as a base to carry the body weight of individual. It also has a important function which is to improve posture of individual. Ankle injuries are often the most frustrating injury as compared to other joints because it is the most frequent used joint

#### Abstract

We previously reported that some main olfactory bulb (MOB) mitral/tufted (M/T) cells send a direct projection to the “vomeronasal” amygdala in female mice and selectively respond to volatile male mouse urinary odors. We asked whether MOB M/T cells that project to the vomeronasal amygdala exist in male mice and whether there is a sexually dimorphic response of these neurons to volatile male urinary pheromones. Gonadectomized male and female mice received bilateral injections of the retrograde

# ○ Are you ready to publish?

# ○ Choosing the right journal

## Best practices

- Aim to reach the intended audience for your work
- Supervisor and colleagues can provide good suggestions
- Shortlist a handful of candidate journals, and investigate them:
  - Aims & Scope
  - Accepted types of articles
  - Readership
  - Current hot topics

Articles in your reference list will usually lead you directly to the right journals.
